New Victoria, Manchester
Delivered by Smiths and JCS Interiors

Terrix Spray Plaster and Paint

Following on from the successful demo apartment below we have secured the order to supply Terrix Polymer spray plaster and paint on the New Victoria project for VINCI Construction in Manchester.

The VINCI team have chosen to use the Terrix paint system over other highly respected popular brands due to the quality of finish, speed of application and simplicity of using the products, this decision demonstrates the forward thinking, progressive and lean thinking of the VINCI and client team working on the development.

Working on projects to provide a quality breathable paint with an unbelievable smooth finish and flame retardant. No longer will poor quality paint that appears drab with evidence of cracking, peeling, damp and loss of colour be acceptable for the building trade.

Terrix® systems offer a uniquely chemical bonded product:

- No risk of cracking or flaking**
- Chemical accelerated set**
- Very clean application process**
- Superior quality finish**
- Consistent finish - minimal snagging**

Additional client benefits of:

- Higher productivity outputs**
- up to 500m²/man/day.
- Ready to use - no mixing on site**
- Full vapour permeability**
no need to wait for taping and jointing to be fully dry - the product can be applied on the same day.
